CATALOG INFORMATION

HOW TO USE THIS CATALOG

Joslyn Clark Controls is pleased to announce the newest edition of our CONTROLOG catalog. This catalog is designed to be an easy to use reference for selecting, pricing, and ordering our unique, comprehensive line of motor controls.

The thumbtab index on page 1 shows the family groups of products used in this catalog. For instance, Tab A is printed on the outside edge of all pages of vacuum control. Included in this section are all vacuum contactors and starters, and all accessories such as factory modifications, heaters, dimensions, and engineering data.

The header at the top of each page lists the product family and the specific product cataloged on that page. For instance a page in the B section may say: NEMA CONTROL TM STARTERS.

Each page with catalog numbers also includes all ordering information in an area at the bottom of the page. Information here includes dimensions, and heater selection.

WARNING

Joslyn Clark Controls, LLC products are designed and manufactured for use in standard commercial, industrial, and residential applications. These products must be installed and used in accordance with the provisions of the U.S. National Electrical Code and or all other State and local codes and industry standards that apply. Installation or use not in accordance with these codes and standards could be hazardous to personnel and/or equipment.

REGULATION 10 CFR 21

Equipment sold by Joslyn Clark Controls, LLC is not intended to be used, nor should it be used, as conforming to Government Regulations 10 CFR 21 (NRC).

STANDARD CONDITIONS OF SALE

Applicable to Joslyn Clark Controls, LLC Products

1. ACCEPTANCE OF ORDERS, MODIFICATIONS AND CANCELLATIONS

Joslyn Clark Controls, LLC representatives are not authorized to make oral offers to sell products. Offers to sell are made in the form of written quotations only. Oral quotations are invitations for the purchaser to submit an order per the quotation. Such solicited orders are subject to acceptance or rejection by Joslyn Clark Controls, LLC as set forth below. Written quotations automatically expire thirty (30) calendar days from date issued unless sooner terminated by notice. Prices stated in written quotations are subject to the pricing terms specified below. All clerical errors in quotations are subject to correction. Joslyn Clark Controls, LLC publications are maintained as sources of general information and are not quotations or offers to sell.

No order for products shall be binding upon Joslyn Clark Controls, LLC until accepted by issuance of Joslyn Clark Controls, LLC printed acknowledge form or by shipment. Any such order shall be subject to these standard conditions of sale and acceptance shall be conditioned on assent to these conditions, which assent shall be deemed given unless purchaser shall expressly notify Joslyn Clark Controls, LLC to the contrary within five days after receipt of acknowledgment or confirmation of an order, and in all events prior to delivery or other performance by Joslyn Clark Controls, LLC against such order. Failure of Joslyn Clark Controls, LLC to object to provisions contained in any purchase order or other communications from a purchaser (including, without limitation penalty clauses of any kind) shall not be construed as a waiver of these conditions nor any acceptance of any such provisions.

No order accepted by Joslyn Clark Controls, LLC may be altered or modified by purchaser unless agreed to in writing signed by an authorized representative of Joslyn Clark Controls, LLC. No order may be cancelled or terminated except upon payment of any loss, damage and expense incurred by Joslyn Clark Controls, LLC arising from such cancellation or termination.

2. DELIVERY

Delivery to a carrier at any Joslyn Clark Controls, LLC plant or other shipping point shall constitute delivery to purchaser; and, regardless of freight payment, title and all risk of loss or damage in transit shall pass to purchaser upon delivery to the carrier.

Care is taken in packing products, but Joslyn Clark Controls, LLC cannot be held responsible for breakage after delivery to the transportation company. All claims for loss and damage must be made by purchaser to the carrier. Claims for shortage or other errors must be made in writing to Joslyn Clark Controls, LLC within ten (10) days after receipt of shipment, and failure to give such notice shall constitute unqualified acceptance and a waiver of all such claims by purchaser.

Freight Allowed terms, as set forth in Distributor Price Schedules issued from time to time by Joslyn Clark Controls, LLC are incorporated herein and hereby made a part of these Standard Conditions of Sale.

Joslyn Clark Controls, LLC reserves the right to determine shipment methods and routings. For special routing or handling requested, additional transportation charges will be added to the invoice. No allowance will be made in lieu of transportation if purchaser accepts shipments at factory, warehouse, freight station, or otherwise supplies its own transportation. Weights shown in Joslyn Clark Controls, LLC literature are approximate.

In the event of a product shortage, Joslyn Clark Controls, LLC reserves the right to allocate its available production or substitute products.

Joslyn Clark Controls, LLC reserves the right to make delivery in installments, unless otherwise expressly stipulated on the face of the purchaser's order; and all such installments when separately invoiced shall be paid for when due per invoice, without regard to subsequent deliveries. Delay in delivery of any installment shall not relieve purchaser of its obligation to accept remaining deliveries.

Joslyn Clark Controls, LLC shall not be liable for any damage as a result of any delay due to any cause beyond its reasonable control, including, without limitation, an act of God; an act of purchaser; embargo or other government act, regulation or request; fire, accident; strike, slowdown; wars; riots; delay in transportation; and inability to obtain necessary labor, materials or manufacturing facilities. In the event of any such delay, the date of delivery shall be extended for a period equal to the time lost by reason of delay.

3. PRICES

Prices set forth in Joslyn Clark Controls, LLC catalogs and price schedules are subject to change without notice. In the event of a net price change, the price of equipment on order but unshipped will be adjusted to the price in effect at time of shipment, including equipment on order pursuant to written quotations unless the quotation provides otherwise on its face. Downward adjustment of prices shall apply only to unshipped portions of outstanding orders.

Joslyn Clark Controls, LLC reserves the right at any time to demand full or partial payment before proceeding with any order or contract of sale if, in its judgement, the financial condition of purchaser does not justify the terms of payment specified. If delivery is delayed or deferred beyond Joslyn Clark Controls, LLC scheduled shipment date, payment shall be due in full when Joslyn Clark Controls, LLC is prepared to ship, and the equipment so delayed or deferred by purchaser may be stored by Joslyn Clark Controls, LLC at the risk and expense of the purchaser. If purchaser defaults when payment is due then the whole contract price shall become due and payable on demand, or Joslyn Clark Controls, LLC at its option, without prejudice to other lawful remedies, may defer delivery or cancel the contract of sale.

4. PAYMENT TERMS

Payment terms as set forth in Distributor Price Schedules issued from time to time by Joslyn Clark Controls, LLC are incorporated herein and hereby made a part of these Standard Conditions of Sale. Invoices will be issued and are payable as partial shipments are made.

5. TAXES AND OTHER CHARGES

All taxes shall be paid by purchaser in addition to prices quoted or invoiced. In the event Joslyn Clark Controls, LLC shall be required to pay any such tax, fee or charge, purchaser shall reimburse Joslyn Clark Controls, LLC therefore; or in lieu of such payment purchaser shall provide Joslyn Clark Controls, LLC at the time the order is submitted an exemption certificate or other document acceptable to the authority imposing the tax, fee or charge. Purchase orders must state the existence and amount of any such tax, fee or charge which it shall be Joslyn Clark Controls, LLC responsibility to collect from purchaser and pay.

6. WARRANTIES

Joslyn Clark Controls, LLC warrants for a period of one year from the date of shipment that any product manufactured by it and sold to purchaser hereunder will be free from defects in material or workmanship at the time of delivery to the carrier. Joslyn Clark Controls, LLC sole responsibility in the event of such defect material or workmanship in violation of the warranty shall be, at Joslyn Clark Controls, LLC option, to repair, replace or refund the original purchase price of any defective product. Joslyn Clark Controls, LLC products are designed and manufactured for use in standard commercial, industrial and residential applications. If these products are to be used in any location which might be of a hazardous nature, such as atomic installations, commercial or military aircraft, missile installations, space explorations or in any other critical application where failure of a single component could cause substantial harm to persons or property, Joslyn Clark Controls, LLC disclaims all responsibility unless it has received a complete description of the application and has concurred that the product in question is suitable for the proposed application. Such concurrence must be signed by a Joslyn Clark Controls, LLC officer. THE AFORESAID WARRANTY IS IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED, AND JOSLYN CLARK CONTROLS, LLC EXPRESSLY DISCLAIMS ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE.

7. REMEDIES ARE EXCLUSIVE

The remedies of the purchaser set forth herein are exclusive and the liability of Joslyn Clark Controls, LLC with respect to any contract or anything done in connection therewith such as the performance or breach thereof, or from the manufacture, sale delivery, resale or use of any equipment covered by or furnished under the contract, whether in contract, in tort (including negligence and strict liability) or otherwise, shall not exceed the price of the equipment or part on which such liability based.

8. LIMITATION OF LIABILITY

JOSLYN CLARK CONTROLS, LLC WILL NOT BE LIABLE FOR ANY CONSEQUENTIAL, SPECIAL, CONTINGENT OR INCIDENTAL DAMAGES WHATSOEVER, INCLUDING WITHOUT LIMITATION, PENALTIES SUFFERED BY PURCHASER AS THE RESULT OF ANY BREACH OF CONTRACT, BREACH OF WARRANTY OR TORTIOUS ACT COMMITTED IN CONNECTION WITH ITS SUPPLYING OR FAILURE TO SUPPLY EQUIPMENT PURSUANT TO ANY ORDER OR OTHER CONTRACT OR FOR ANY LABOR COSTS INCURRED AS A RESULT THEREOF.

9. PATENT PROTECTION

If Joslyn Clark Controls, LLC is notified promptly by the purchaser in writing and is given authority, information and assistance for the settlement an defense of any action or assertion brought against the purchaser insofar as it is based upon a direct infringement of a claim or claims of one or more U.S. patents or trademarks electronic equipment products purchase from and manufactured by Joslyn Clark Controls, LLC, standard commercial items when used or sold for the purposes for which such products are customarily used, Joslyn Clark Controls, LLC will defend or settle such actions or proceedings and will satisfy settlement of a final award for such infringement against the purchaser but Joslyn Clark Controls, LLC assume no liability, consequential or otherwise, for and the purchaser agrees to hold Joslyn Clark Controls, LLC harmless from infringements of patent claims covering a method or process in which any such products may be used or covering the equipment, assembly, circuit, system or combination in which any such products may be used as a component, or from any trademark infringements involving any marking or branding applied at the request of the purchaser. Joslyn Clark Controls, LLC assumes no liability, consequential or otherwise, for and the purchaser agrees to indemnify and hold Joslyn Clark Controls, LLC harmless against any claims resulting from production of articles or materials which are manufactured by Joslyn Clark Controls, LLC to the purchaser's specifications or from the production of articles or materials designed by Joslyn Clark Controls, LLC to meet the purchaser's requirements arising out of the use of any equipment, materials, parts or machinery furnished by the purchaser in making products to purchaser's specifications. No costs or expense under this paragraph shall in any event be incurred for the account of Joslyn Clark Controls, LLC without its written consent.

10. RETURN OF GOODS

No Joslyn Clark Controls, LLC product may be returned without first obtaining Joslyn Clark Controls, LLC written permission, and all returns will be subject to the Return Goods Policy in effect when the return goods request is submitted to Joslyn Clark Controls, LLC. No returns will be allowed for any custom-built products under any circumstances.

11. SALES CONVEYS NO LICENSE

Joslyn Clark Controls, LLC sale of products does not convey any license, expressly or by implication, estoppel or otherwise, under any patent claim with respect to which Joslyn Clark Controls, LLC can grant licenses covering a completed equipment or any assembly, circuit, combination, method or process in which any such products are used as components (notwithstanding the fact that such products may have been designed for use in, or may only be useful in, such patented equipment, assembly, circuit, combination, method or process, and that such products may have been purchased and sold for such use). Joslyn Clark Controls, LLC expressly reserves all its rights under such patent claims.

12. PURCHASER'S COMPLIANCE WITH LAWS

Joslyn Clark Controls, LLC does not assume any liability for the purchaser's compliance with or adherence to any federal, state or local laws or regulations.

13. ORDER OF PRIORITY

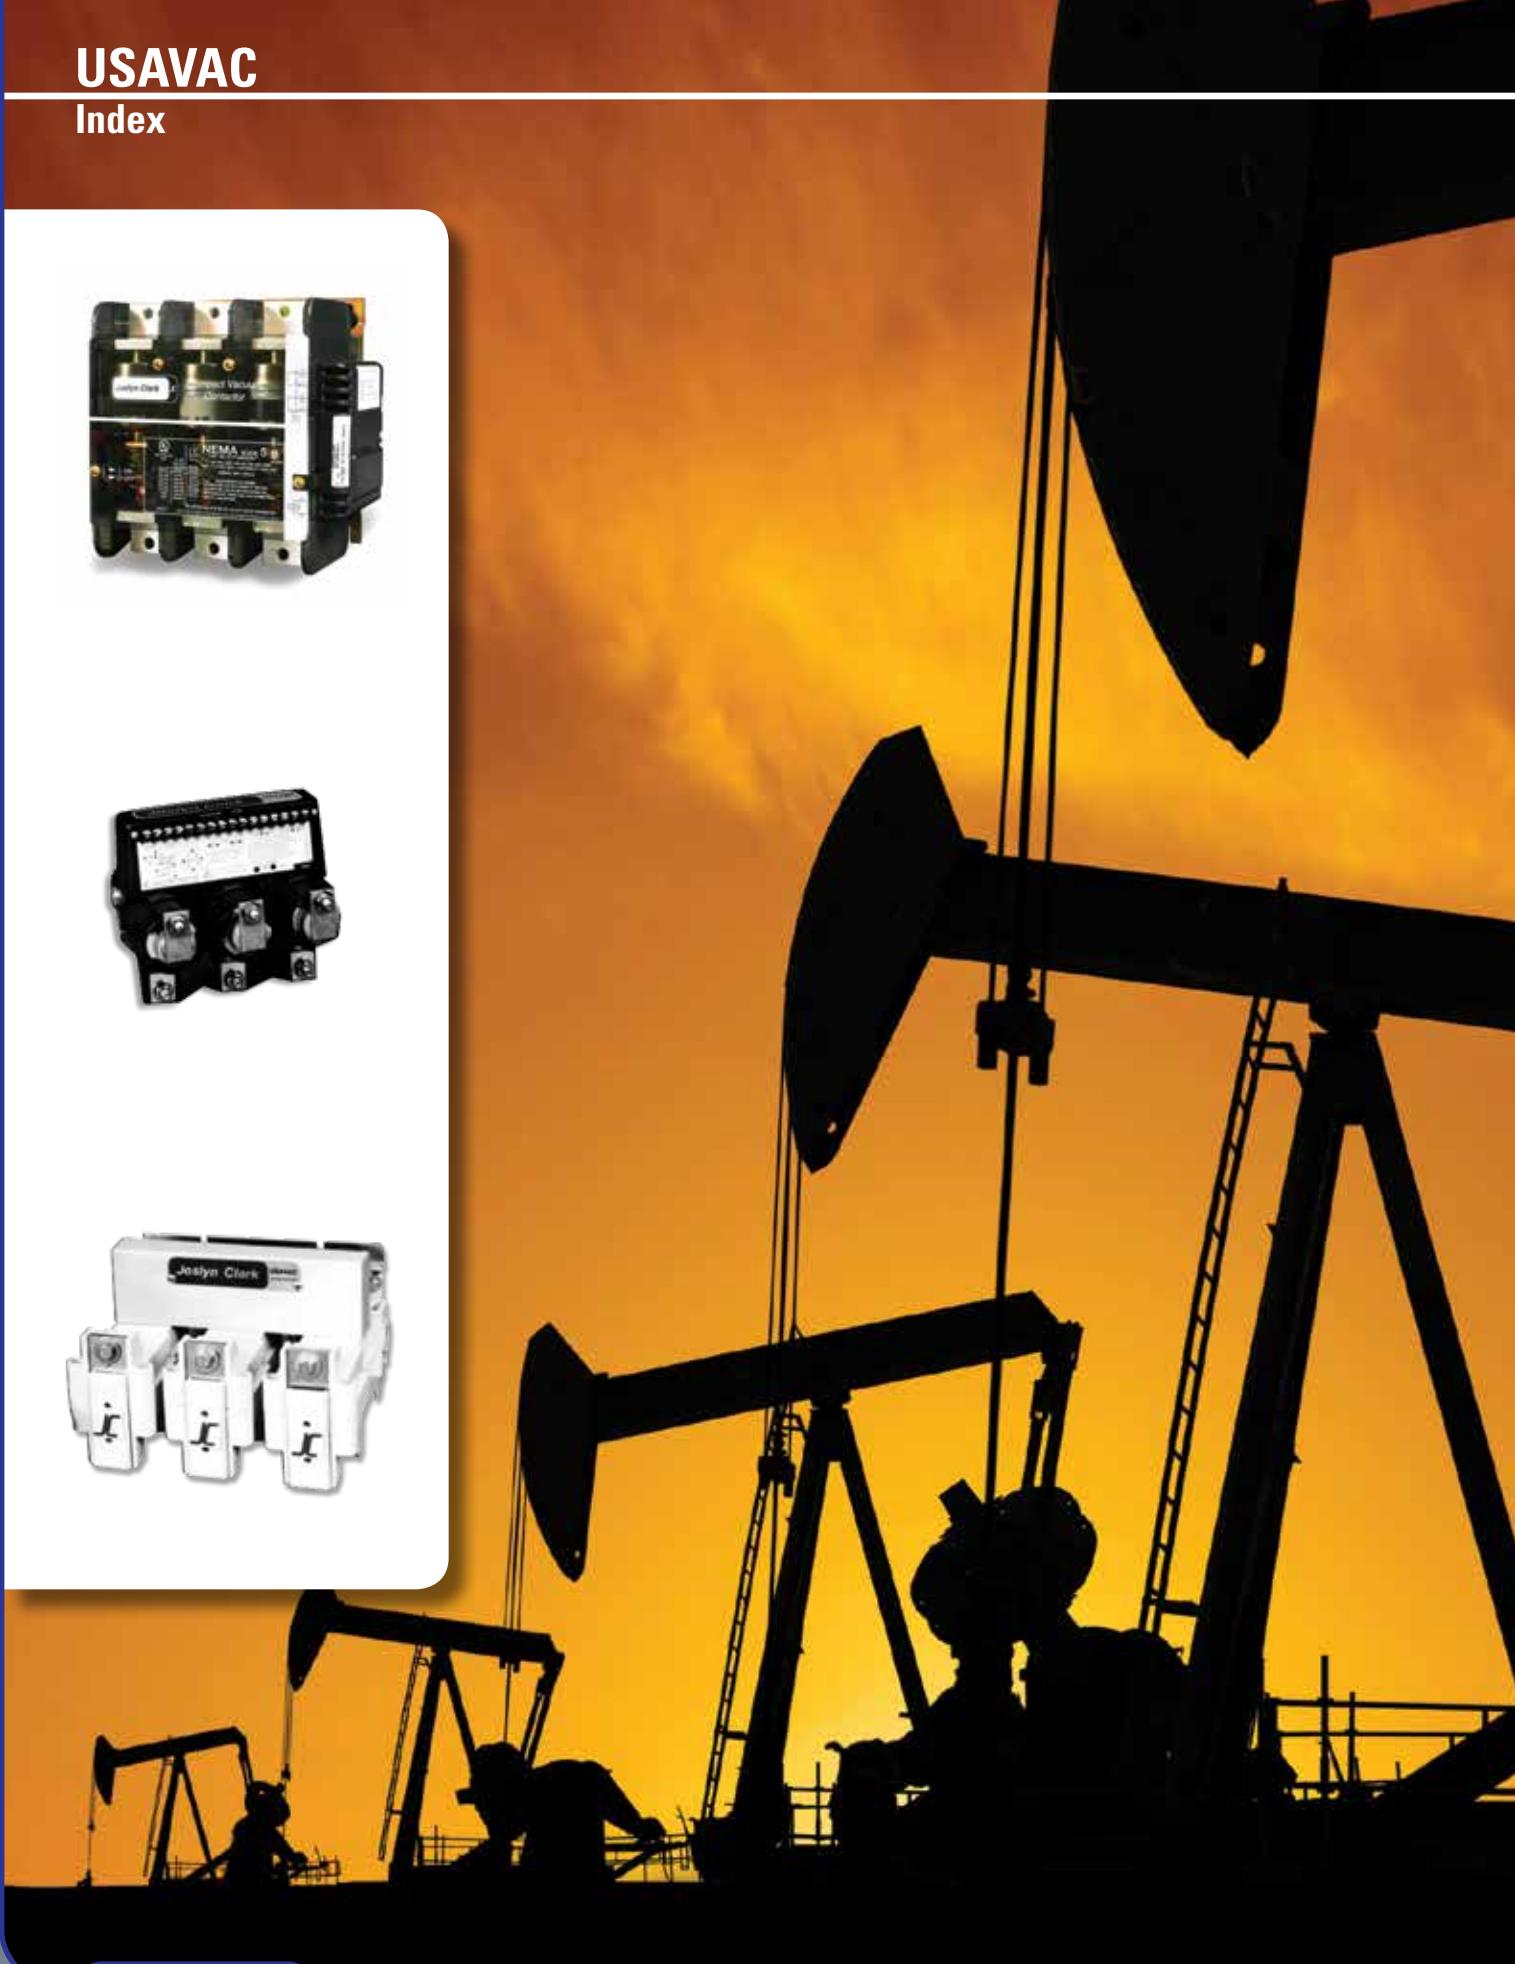

In the event of any conflict between the standard conditions of sale applicable to Joslyn Clark Controls, LLC products and the terms of any contract entered into between Joslyn Clark Controls, LLC and the purchaser, the Joslyn Clark Controls, LLC standard conditions of sale shall prevail.

14. GOVERNING LAW

All contracts for the sale of Joslyn Clark Controls, LLC products shall be governed and construed according to the laws of the State of Delaware.

AC Reduced Voltage Starters

A

Reduced Voltage - 600 Volts Rated Type CV & VS Auto Transformer Closed Transition

Designed for automatic starting of squirrel cage motors when the starting current must be reduced. Closed transition auto transformer starters provide the highest possible starting torque per ampere of line current.

Auto transformers are 3-coil type, with voltage taps at 50%, 65% and 80% rated in accordance with NEMA Standards ICS-214.21 for medium-duty starting service.

Overload Heaters

A

Heater Selection

Select heaters based on motor nameplate full-load current. Tables are for continuous rated motors. Full-load current for a given horsepower motor will vary from one manufacturer to another and will depend on RPM of motor.

Type of Protection

Heaters selected directly from the tables provide a maximum of 125% protection at 40°C ambient, is suitable for motors with a 1.15 service factor with a 40°C rise or less and with motor and controller at the same temperature. For motors with 1.0 service factor or with a temperature rise greater than 40°C without service factor rating, use one size smaller heaters than in table. The ultimate trip of the heater is approximately 125% of the minimum current shown in the tables in a 40°C ambient. The overload relay provides protection in accordance with UL Class 20. For further data refer to Controlog section B.

Ambient Correction

Not necessary when overload relay is ambient compensated as identified by green reset rod. For control at an ambient constantly less than the motor ambient, correct by decreasing the nameplate motor full-load current by 8% per 10°C difference in ambient.

For control at an ambient constantly greater than the motor ambient, correct by increasing the nameplate motor full-load current by 8% per 10°C difference in ambient.

Branch Circuit Protection

Branch circuit protection should be provided per USA National Electric Code or the Canadian Electrical Code. Current rating of the protective device must not exceed the maximum value listed in the table.

Automatic Reset

Automatic reset operation should not be used with two-wire control.

Notes:

For Reversing Applications and change 4th and 5th digit of cat # from 18 to 38.

For Inching or Plugging Duty Refer to Factory.

For Latched Contactors change "MVS" to "MVSL" - - & specify Trip Coil Voltage.

* These Starters have 45KV BIL Rating if 60KV Required use 200A or 400A Rated Starters.

For NEMA 3R Rating Change 5th Digit from "T" to "R"

Free Standing, Single High Compact Vacuum Starter in NEMA 12 Enclosures. Designed to comply with NEMA1CS2-324 Class E 2 controller.

Features Offered:

- Fault Make, Load break visible blade disconnect switch with automatic grounding arm.
- Grounded metal isolation between LV and Medium Voltage Compartments.
- Maintenance free Joslyn Clark Vacuum Contactors.
- Suitably rated current limiting power fuses with striker pins and 3 phase trip bar.
- C.P.T. provided with 2 primary and 1 secondary fuses, 120V secondary.

Ordering Information

- Engineering Data page A43.
- Modification Data page A49 & 50
- Renewal Parts page A36.

Free standing, single high compact feeder capacitor. Feeder controller to comply with NEMA1CS2-324.

- Fault Make, Load break visible blade disconnect switch with automatic grounding arm.
- Grounded metal isolation between LV and Medium Voltage Compartments.
- Maintenance free Joslyn Clark Vacuum Contactors.
- Suitably rated current limiting power fuses with striker pins and 3 phase trip bar.
- C.P.T. provided with 2 primary and 1 secondary fuses, 120V secondary.

Designed for automatic starting of Squirrel Cage Motors when the starting current or torque must be reduced. Joslyn Clark Reduced Voltage Auto Transformer Starters incorporate equipment exactly as the full voltage starters, with the additional following equipment

- 1- Free Standing Cubicle Containing:
 - 1- 3 Pole Starting Vacuum Contactor
 - 1- 3 Pole Shorting Vacuum Contactor
 - 1- Set of Mechanical Interlocks
 - 1- 3-Coil Auto -Transformer with 50-65-80% taps.
 - 1- Incomplete Sequence Timer

B

TM - NEMA CONTROL

General Information

B

Auxiliary Contacts - Auxiliary contact blocks may be added with the starter in place, without tools. The same block is used on sizes 00 thru size 4 as either N.O. or N.C. A total of 4 auxiliary contacts can be added. The addition of side mounting kits allows a total of 8 auxiliary contacts through size 4.

Power Pole - Full rated power poles, N.O. or N.C. through NEMA size 4, may be field added, without coil change. A tie pole with 2 N.O. contacts is available for two-speed single winding (consequent pole) motor applications.

Adapter Plate - Allows use of Type TM starters in place of other makes thru size 2, without drilling new mounting holes. The adapter plate holes align with those of most other starters thru size 2 - proof of the TM compact design.

Reliability - The basic contactor design, using polysulphone and teflon guides, melamine and rosite moldings along with stainless steel springs, provides exceptional electrical and mechanical life. The operating state is clearly visible from the front, indicated by the position of the contact carrier. The contactor is easily operated from the front for circuit checking.

Operating Coils - All coils are encapsulated. Size 00 thru 4 are plug-in type and each is factory tested twice, for long reliable service.

Coil changes are not required for any combination of add-on accessories.

Power Wiring - Up-front terminals and straight through design make power wiring easy. As few as 3 connection points per pole reduces the possibility of loose connections and contributes to the reliability of the starter.

Contact Inspection - Loosen 2 captive screws and remove the contact carrier, through size 4.

Overload Relay - Available with ambient compensation (green reset rod) or non-ambient compensation (red reset rod). An easily accessible + 15, adjustment knob can be locked at the 100% setting. High accuracy of repetitive trip is assured by factory testing every unit twice.

Heaters - Heater numbers are stamped on the surface for easy identification. The same heaters are used for TM & HP series overload relays for both ambient and non-ambient compensated overload relays.

Versatility - Uniform mounting dimensions; Add-on auxiliary contacts; Plug-in coils Accessories, such as power pole, mechanical interlock provides maximum versatility and flexibility of inventory panel layout and installation. Self-rising saddle-clamps are included on all control terminals for quick wiring.

Compact Size - Integral overload relay design, with straight through power cable design, provides compact overall size. Straight through wiring reduces overall panel area for a NEMA wired device.

Uniform Mounting Dimensions - Along with mechanical interlock design, make reversing devices and other mechanically interlock devices the same height and depth as non reversing. This allows intermixing in rows and saves panel space.

Uniform Mounting Dimensions - Only 2 mounting plate sizes for 00 through 4 starters. One mounting plate for sizes 00-2, the second for sizes 3 & 4. This provides great flexibility for intermixing starter sizes in rows and reduces panel layout time.

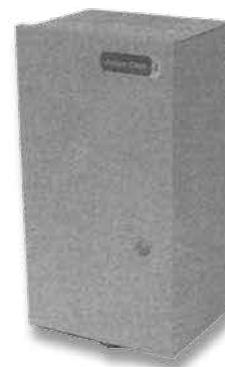

Pilot Device Kits - Operator devices may be added in the field. Push button and pilot light kits for non-combination enclosures are suitable for use in NEMA Type 1, 4 & 12. This simplifies selection and increases flexibility.

TM - NEMA CONTROL

General Information

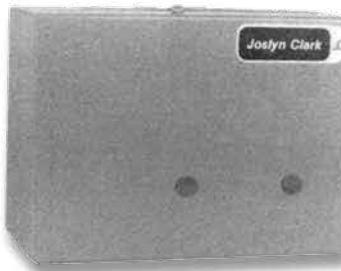

Non-Reversing

- Bulletin 6013 NEMA Starters.
- Bulletin 7707 NEMA Contactors.
- NEMA Size 00-6.
- NEMA Type 1, 4 & 12 Enclosures.
- NEMA Size 00-2.
- NEMA Type 3R Enclosure.
- Bulletin 6013 Starters are available single phase through size 2P, 3 phase through size 6.
- Bulletin 7707 Contactors are available 2 & 3 pole through size 6 and 4 pole through size 4.

Reversing

- Bulletin 6030 NEMA Starters.
- Bulletin 6031 NEMA Contactors.
- NEMA Size 00-6.
- NEMA Type 1, 4, 12 Enclosures
- Bulletin 6030 reversing starters and Bulletin 6031 reversing contactors include mechanical and electrical interlocks. Bulletin 7707 Contactors are available 2 & 3 pole through size 6 and 4 pole thru size 4.

Multi-Speed

- Bulletin 6050 NEMA Starters.
- NEMA Size 0-5.
- NEMA Type 1, 4 & 12 Enclosures.
- Bulletin 6050 multi-speed starters are designed for two-speed, single winding (consequent pole) and two-speed, two winding (separate winding) motor applications.
- Mechanical and electrical interlocks are included.
- Starters for three and four speed motor applications can also be supplied.

2 -50AMP	KTMA32-12	KTMA32-13

1. Includes 3 - Phase Overload Relay complete, less heaters.

Single Phase Application

A three phase overload relay is used for single phase applications. Only one heater is required and is to be installed in the center phase cavity of the relay.

Heater Selection

Select heaters based on motor nameplate full-load current. Tables are for continuous rated motors. Full-load current for a given horsepower motor will vary from one manufacturer to another and will depend on RPM of motor.

Type Of Protection

Heaters selected directly from the table provide a maximum of 125% protection at 40°C degree ambient, is suitable for motors with a 1.15 service factor with a 40°C degree rise or less and with motor and controller at the same temperature.

For motors with a 1.0 service factor or with a temperature rise greater than 40°C degree without service factor rating, use one size smaller heaters than in table. The ultimate trip of the heater is approximately 125% of the minimum current shown in the tables in a 40°C degree ambient.

Ambient Correction

Not necessary when overload relay is ambient compensated as identified by green reset rod. For control at an ambient constantly less than the motor ambient, correct by decreasing the nameplate motor full-load current by 1% per °C difference in ambient in ambient for heater selection.

For control at an ambient constantly greater than the motor ambient, correct by increasing the nameplate motor full-load current by 1% per °C difference in ambient.

Branch Circuit Protection

Branch circuit protection should be provided per National Electric Code (USA) or the Canadian Standards Association rules.

Automatic Reset

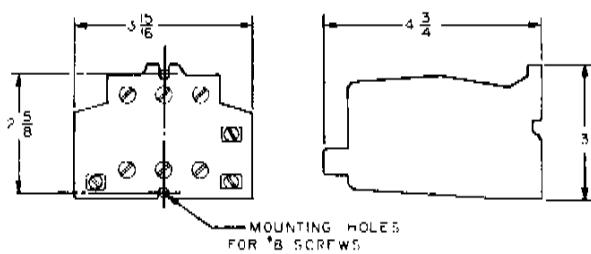

Automatic reset operation should not be used with two-wire control.

Overload Adjustment

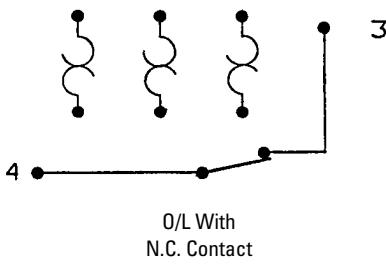

These overload relays are manufactured with an exclusive calibration process to assure the ultimate in tripping accuracy and repeatability. The overload allows a true $\pm 15\%$ adjustment as a result of the process and is well suited for use with unity service factor motors requiring a shorter locked rotor tripping time. The $\pm 15\%$ adjustment is easily made by means of a small dial on the bottom of the relay. A quick field modification also permits removal of the adjustment feature.

TM - NEMA CONTROL

Motor Full Load Current Data

The full load currents listed below are "average values" for motors of several manufacturers. These "average values" are as listed in the National Electrical Code 1996 and must only be used as a guide for selecting suitable branch circuit components.

The rated full load current shown on the motor nameplate is likely to vary from the values listed below.

The NAMEPLATE full load current should always be used in determining the rating of devices.

When using a design "E" Motor Special considerations apply. Refer to NEC 1996 tables
430-151A & B & 430-152, page 70-453/454.

NOTES:

- To obtain F.L.C. for 200 and 208 Volt motors multiply 230 volt values by 1.15 and 1.10 respectively.
- To obtain F.L.C. for 265 and 277 Volt motors multiply 230 Volt values by .87 and .83 respectively.

Notes:

1. For use with the listed open type devices. Each kit includes external "Reset" button(s) and "Reset" plug(s), either of which may be installed in the pre drilled enclosure cover. All enclosures have sufficient space to allow mounting a transformer or other equipment of similar size, unless otherwise noted.
2. Does not have space for transformer.
3. External "Reset" not included. For external "Reset", add Kit Number KTM32-20.
4. Will not fit standard enclosures.
5. Not applicable to NEMA 1 - Bulletin 6018, 6038 & 6058

Enclosure Dimensions

NEMA 12 Enclosure Dimensions Modified for Outdoor Use

Joslyn Clark NEMA 12 enclosures may be field modified for outdoor use as follows:

NEMA 3

- Watertight conduit hubs shall be used at all conduit entrances.

NEMA 3R

- Drain holes of 1/8 inch diameter shall be added to the bottom of the enclosure.

AC CONTROL - 5000

General Information

Application

The 5000 Space Savers in NEMA Sizes 00 thru 5 offer versatile and compact AC contactors for industrial motor, heating and other power circuit switching. Simplified design coupled with built-in reliability assures the user long, trouble-free operation in machine tools, process controls, air-conditioning, custom panels and other demanding applications.

Description

All 5000 magnetically operated contactors incorporate a modern, modular design compatible with other control component modules. Terminal location make them ideal for straight-through wiring and for wire-channel layouts. Accessible, up-front pressure-type terminals are standard.

The hot molded, high arc resistant two or three piece housings not only totally enclose contacts and operating coils for environmental protection; but also separate them as added protection against internal phase-to-phase short circuits.

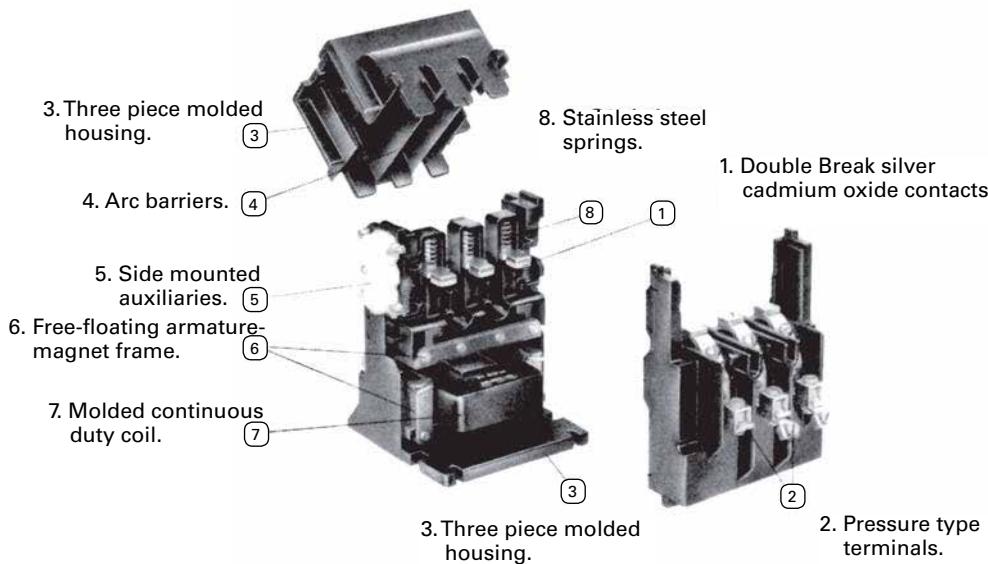

Generous size, long wearing double break contacts are furnished on all sizes. Contacts are made of silver cadmium oxide for "anti-weld" protection under high inrushes. Contacts do not require adjustment or periodic dressing (filing).

Coil Data

Standard coils for continuous duty service are equipped with pressure type terminals. Molded coil construction resists moisture; thermal and mechanical stress.

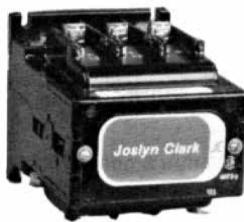

Typical User Benefits:

- Modern Modular Design - makes contactors compatible with other control panel components. Ideal for wire-channel layouts.
- Compact Size - 5000 Contactors conserve control panel area without sacrificing accessibility or reliability. The 100 amp. Size 3 contactors occupy less than 19.0 sq. in. of panel space.
- Only 15 Basic Parts - This simple design affords longer operating life and greater reliability than more complex units.
- Fast Installation - Accessible up-front pressure type terminals on both power and control circuits, take unlagged stripped wire. Design permits straight-through wiring.
- Quick, Easy Inspection - Simply withdraw the front housing piece, after removing two screws, all main contacts are in full view. No need to disturb wiring or remove contactor from panel for complete inspection of all parts.

NEMA CONTROL - HP

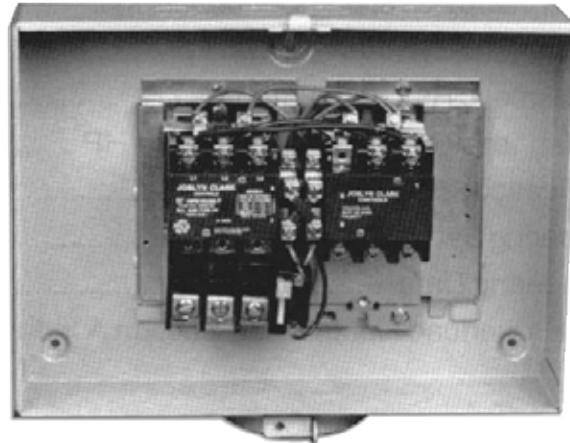

General Information

**The Joslyn Clark NEMA Size Starter
That Saves You Money**

C

NEMA Type 1 Enclosed
Non - Reversing Starter

NEMA Type 1 Enclosed
Reversing Starter

Quality — with economy of cost and space

The Joslyn Clark HP Motor Starter has been developed through many generations of controllers. Closely related to the TM design, the HP starter is rated for its horsepower capability as well as in standard NEMA frame sizes. Like the TM starter, our HP starter was designed in one piece as a starter, a single integrated unit consisting of a power contactor and a thermal overload relay mounted on a rigid common base.

This compact starter takes less than 19 sq. in. of panel space, permitting the use of smaller, less costly enclosures. It provides more wiring space for easy wiring and requires only two mounting screws to save installation time and cost.

NEMA sizes 00, 0, 1 & 2 are the same small physical size, providing greater flexibility.

C

NEMA Sizes 00, 0, 1, & 2

Quality — with economy of cost and space

LOW ENERGY 8.4 VA COIL

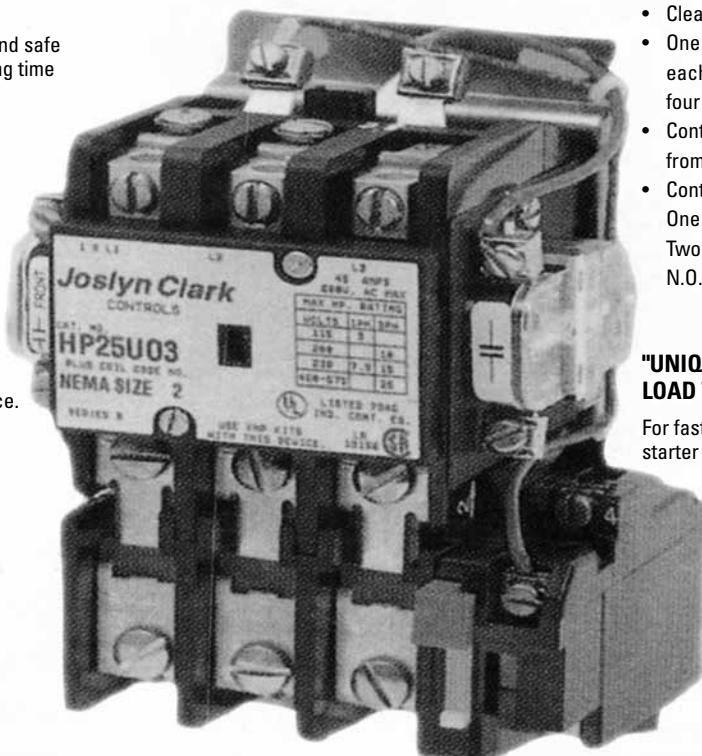

Same energy efficient coil for NEMA sizes 00, 0, 1 & 2. Reduces transformer size and cost. Small transformer size saves panel space. Low VA inrush coil reduces line disturbance, ideal for use with solid state control.

TRUE "UP-FRONT" "STRAIGHT THROUGH" WIRING DESIGN

Makes the HP Starter easy to wire and safe to trace. Save through reduced wiring time and panel cost.

SMALL SIZE

Requires only 19 sq. in. of panel space.

COVER NAME PLATE

Clear and easy to identify size, rating, and catalog number.

AUXILIARY CONTACTS

- Easy to install
- Clear side cover
- One Kit may be attached to each side of the starter providing up to four contacts
- Contacts positive driven from main contact carrier
- Contact Kits -

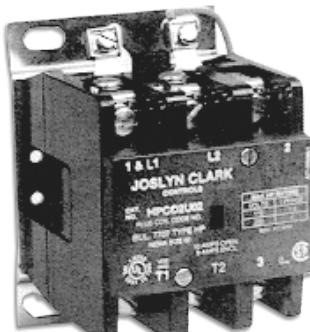

One N.O.	KHP - M10
Two N.O.	KHP - M20
N.O. & N.C.	KHP - M11

"UNIQUE" SPRING LOAD TERMINALS

For fast load connection. Save by reducing starter wiring time.

General Data

Joslyn Clark Type 100T Heavy Duty Push Buttons are available in Standard, Mushroom Head, Push Pull, and Key-Operated .

All units are suitable for use in NEMA Type 1, 3, 3R, 4, 4X, 12, and 13 applications when mounted in enclosures rated for those same applications. Although not needed on all Type 4X applications, protective caps provide improved resistance to some corrosive materials. They are not required by UL.

NEMA 13 Oiltight and NEMA 4 Watertight integrity is assured by a unique collapsing neoprene diaphragm. Three neoprene gaskets in back of the panel insure a tight fit and flexibility for different thickness enclosures. The die cast housing fits both standard Oiltight mounting holes with a 1-13/64" or 30.56mm diameter.

Single circuit double break contact blocks are made of tough clear plastic for easy contact inspection. Blocks are attached to the operator by a single captive screw and positioning pin to make installation quick and easy. Up to 8 blocks may be stacked on each push button operator (2 wide, 4 deep). Up to 6 blocks on each selector switch.

Brushed aluminum legend plates are held in place by a locking thrust washer which extends through the plate into the panel for easy alignment. Standard legend plates are 1-7/8" square with black etched in letters. Jumbo automotive size 2-1/2" square legends are also available.

Standard Operators

Interchangeable snap-on, reusable tough molded-in-plastic cups, are available in black, red, green, yellow, amber, blue, white, and brown. Your choice of three octagonal, brushed aluminum guard rings comes in:

Unguarded - Button extends beyond ring for easy access.

Guarded - Ring is flush with button to prevent accidental operation.

Extended - Ring extends beyond button Guard making accidental operation unlikely.

Standard and Jumbo Mushroom Head

Both mushroom heads fit the same operator and come in black, red, green, and yellow. The diameter of the standard head is 1-3/8" - jumbo head is 2-1/4" in diameter.

Illuminated Push Button

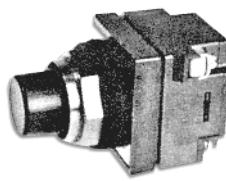

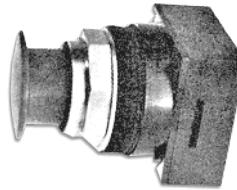

Plastic Lens are available in seven colors and in standard and mushroom head (1³/₈) variety. The operator combines a momentary push button and pilot light in one unit.

Push-Pull

Both Illuminated and Non-Illuminated standard mushroom heads are available in 2 position maintained operators.

Key-Operated

When the key-type cylinder lock is depressed with or without key inserted - the operator is locked down and can only be released by the key. A red jumbo mushroom head can be field or factory installed for emergency stop applications. Other types of key operations are obtainable.

Joslyn Clark Type 100T Heavy Duty Selector Switches are available in Standard Knob, Chrome Lever, Key-Operated, Joy Stick and Selector-Push.

The standard knob and chrome lever switches are obtainable with two, three and four position operators. They come in:

2 position maintained and spring return; 3 position maintained, spring return from right to center, left to center, right and left to center; and 4 position maintained.

Key operated switches come in two or three position maintained and spring return and all 4 position switches are maintained.

There are several cams for all selector switches in order to accomplish numerous types of circuits. Positive indexing assures operating reliability.

Up to eight single circuit contact blocks - four on either side - may be attached to any operator with a single captive screw and positioning pin on each block.

A tip on the locking thrust washer extends through the legend plate to the panel, locking both plate and operator in position.

Legend plates are of brushed aluminum with etched black lettering. An octagonal aluminum guard ring locks operator on the panel adding to the look of quality.

Standard Knob

Interchangeable knobs are of high-impact plastic in black, red, green, yellow and blue. They fit tightly to an inner white knob which provides an easy-to-see white index mark for the cap.

Standard Knob Illuminated Selector Switch

Available with seven interchangeable colored lenses in both two position maintained and three position maintained and spring return.

Selector Switches

Chrome Lever

These selector switches have the same operating characteristics as the Standard Knob model. An extended chrome lever, 1-3/4" long, provides quick and positive operation with or without gloves.

Key-Operated

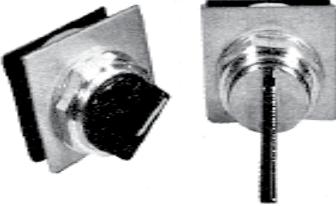

Key-operated switches have the same positive action as the Standard Knob and Chrome Lever types. Operators are obtainable with many key removal positions. There are special keys available for added security.

Joy Stick

All 3 position and 5 position maintained and spring return joy sticks have the same positive action as the other selector switches. A special joy stick model can be supplied with a release button on top. This prevents movement of the joy stick until the button is depressed - an excellent safety feature.

Selector-Push

Selector-Push operators combine the actions of a selector switch and momentary push button. A rotating collar provides the selectivity needed to provide for several functions in one operator.

Pilot Lights

Joslyn Clark Type 100T Heavy Duty Pilot Lights are available in Standard and Press-To-Test. A choice of power configurations to match various shock and vibration levels insure longer lamp life. Plastic lenses come in red, green, yellow, amber, blue, white and clear. All lamps have bayonet type bases.

There are four basic power configurations.

1. **Transformer Type (120, 240 or 480 Volts)** uses a modular heavy-duty transformer - 50 or 60 Hertz - to step line voltage down to 6 volts for longer lamp life under high shock and vibration conditions.
2. **Resistor Type (120 or 240 Volts)** drops voltage to 60 and 120 volts respectively to lengthen lamp life in less severe applications.
3. **Full-Voltage Types (6, 12, 24 or 120 Volts)** are used in applications with little shock or vibration. AC and DC rated.
4. **Neon Type (120 Volts)** will withstand extremely heavy shock and vibration conditions - use of clear and yellow lens is recommended. AC and DC rated.

Standard

Dome Lenses are made of thick plastic, fluted to give wide visibility. They come in red, green, yellow, amber, blue, white and clear.

Press-To-Test

Features and colors are the same as Standard Pilot Lights except the lenses are tubular. A N.O. and a N.C. contact block comes with unit.

Contact Blocks (600 Volt)

Features

- Contacts enclosed in a clear plastic housing
- Fine silver contact tips
- Long life steel springs
- Same contact block for all operators
- "Quick-Stack" assembly
- "Easy-Access" terminals
- "One-Block-At-A-Time" removal
- Easy contact mode identification
- UL listed

Joslyn Clark Type 100T Heavy Duty Contact Blocks are designed to simplify installation and assure trouble-free operation.

Contacts are enclosed in sturdy plastic to prevent foreign material from entering the block. The clear plastic allows easy contact inspection. Contact tips are made of fine silver for high conductivity. Strong resilient springs reduce contact bounce and assure long reliable operation. The 3/4" blocks may be used on all operators installed side by side and four in tandem.

The single No. 8 tapped-head captive screw and positioning pin on each block make stacking fast and easy. Terminals are inclined for direct access and speedy wiring also angled to provide extra wiring room. A self-rising saddle assures a solid vibration resistant connection at each terminal for two No. 12 copper wires. Individual block removal is automatic without possibility of the entire stack coming off when the top block is removed.

Contact mode is readily identified. Normally-Open contact blocks have green operators marked with both N.O. and symbol. The normally-closed blocks have red operators and are marked with N.C. and symbol.

100T-PTT1R

Pilot Light
Operator & Lens
100T-PLT1R

Standard Lens

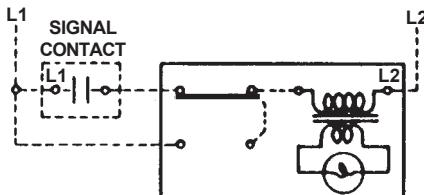

Pilot Light

Pilot Lights are available in four different power configurations - transformer, resistor, full voltage and neon types. Transformer types are available with 480, 240, and 120 volt primary voltages and all have a 6.3 volt secondary for long lamp life. They will withstand a considerable amount of shock and vibration. The resistor type is available in 240 and 120 volt varieties with the resistor dropping the voltage to 120 and 60 volts respectively. Full voltage units are available with 6, 12, 24, and 120 volt lamps. The neon bulbs burn less brightly therefore it is recommended that only yellow and clear lens be used for these units.

Press-To-Test Lights

Press-To-Test Lights are available in the same four power configurations as the standard pilot lights - Transformer, resistor, full voltage, and neon. They are furnished pre-wired with a normally open and a normally closed contact. As shown in the diagram below it will allow you to test the lamp without interfering with the normal operation of the pilot light.

Assembled 100T Push Button Stations

The most commonly used push button stations are available assembled in NEMA Type 13 (oiltight and dusttight) sheet steel and in NEMA 4 (watertight) stainless steel enclosures.

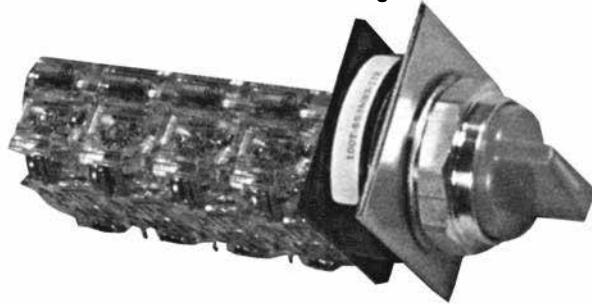

For custom control stations not listed, order operators, contact blocks, nameplates, and enclosures as separate items.

MILL DUTY PRODUCTS

Limit Switch

Application

Type 102TL Track Type Limit Switches are designed as pilot circuit devices for all heavy duty applications to limit travel or set up functions at predetermined positions.

Operation

The contacts of these switches make and break very quickly due to the snap action of the toggle type operating mechanism. The operating arm is secured to a hollow outer shaft that fits over the camshaft. When the arm is tripped, it turns the outer shaft which actuates the toggle mechanism. The toggle mechanism does not change position until the operating lever is past the midpoint of its travel; then it snaps over and turns the camshaft quickly. Since the cams are fastened rigidly to the camshaft, they in turn impart snap action opening and closing to the contacts. Force to operate switch is approximately 25 inch-pounds.

E

Angular Travel

Total angular travel of the arm from one tripped position to the other is 90°. However, the contacts are actuated when the arm moves 60°, the balance of the travel is to clear the arm so that the linear operator may pass over.

TLSF-11 or 22 with Straight Fork Lever

Features:

- Double Break removable Silver-to-Silver Contacts.
- Each contact may be independently changed from normally open to normally closed and vice versa without disassembly.
- Operating Arm adjustable on shaft.
- Oil impregnated bearings at contact finger pivot points.
- Cast weatherproof enclosure standard. Dust-tight and watertight enclosures are also available for all types.
- Contact wearing parts completely interchangeable with same parts in Type 101SD Master Switch, 101FS Foot Switch, and 102HL & CHL Limit Switch.

Safety Switches

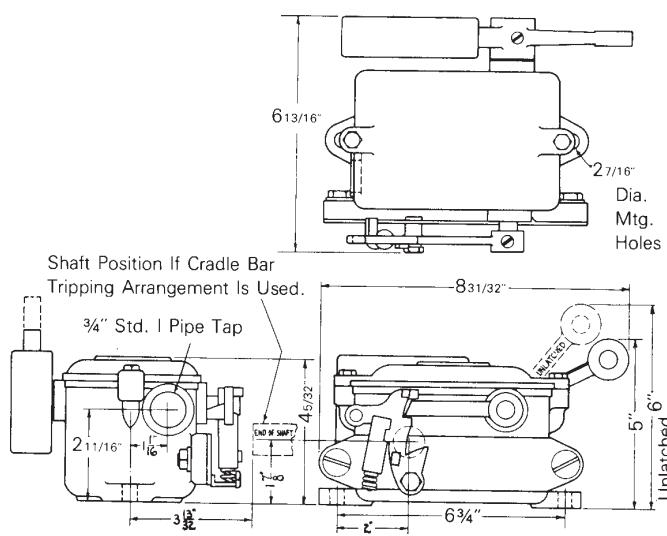

Application

Type 102RS Rubber Calender Safety Switch is a pilot circuit device used chiefly in the Rubber Industry as an emergency stop arrangement on Calenders, and similar motor driven machinery.

Features:

- Gravity Operated.
- Double break removable silver-to-silver contacts.
- Can be mounted horizontally or vertically.
- Oil impregnated shaft bearings need no lubrication.
- Contact wearing parts completely interchangeable with same parts in type 101SD Master Switches, type 101FS Foot Switches and type 102HL, CHL, TL Limit Switches.
- Dust-tight enclosure is standard.

Rubber Calender

Type	Contacts	Poles	Dust-tight Enclosure Catalog No.
RS22	2 NC	2	A102-66750A

Note:

1. Includes limit switch complete with cable, cable weight and counterweight.

Ordering Information

- Use complete catalog number when ordering. If modification is required, state in full detail on the order.
- Modifications:
 - If cradle bar tripping arrangement is desired, add the following to the catalog number, "including part number A102-66747A tripping bar"

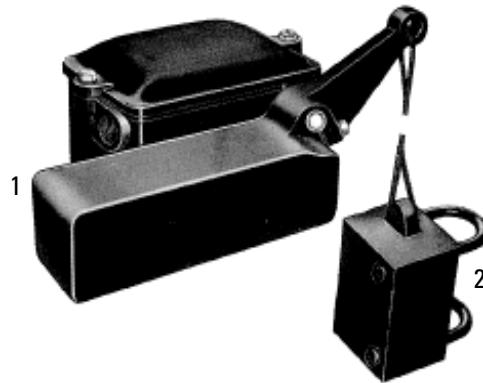

**Application**

The Type 102CHL pilot circuit limit switches are designed for mounting beneath the hoisting mechanism of electrically operated cranes to serve as upper limit safety stop switches. Such a safety device is necessary to prevent the hook from being raised into the hoisting mechanism where it would cause damage.

Enclosure - Standard die cast aluminum enclosures.

Dust-tight Enclosures - Dust-tight enclosures can be furnished at an additional charge for the dust seal gasket.

Watertight - Watertight enclosures are also available. The same heavy case is specially fitted with watertight bushings and seals to meet NEMA watertight tests.

- Cams A10252609
- 2 Pole Base A10241255A
- Weight 1 B102-80615
- Weight 2 A102-54265

Features:

- Toggle type snap action.
- Double break removable Silver-to-Silver Contacts.
- Contact wearing parts completely interchangeable with same parts in Type 101SD Master Switch, Type 101FS Foot Switches and Type 102HL and TL Limit Switches.
- Each contact may be independently changed from N.O. to N.C. and vice versa without disassembly, by turning cams on shaft 180°.
- Operating arm adjustable on shaft.
- Automatic reset when hook is lowered.
- Die cast aluminum enclosure standard.

Approximate Dimensions**Ordering Information**

Use complete catalog number.

If dust-tight enclosure is desired, use the same catalog number as for standard enclosure and specify "Dust-tight" on the order.

MILL DUTY PRODUCTS

General Information

Application

Type 101 FS Foot Operated Master Switches are used on applications requiring a rugged foot operated pilot circuit device.

Weatherproof enclosures are standard on all types.

Dust tight enclosures can be furnished at an additional charge for the dust seal gasket.

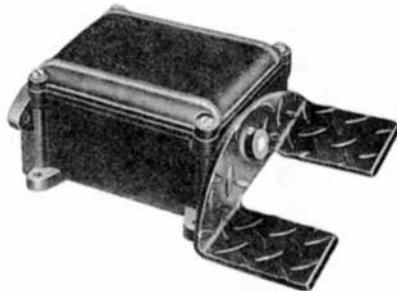

Enclosures

Two pole foot switches have cast aluminum enclosures.

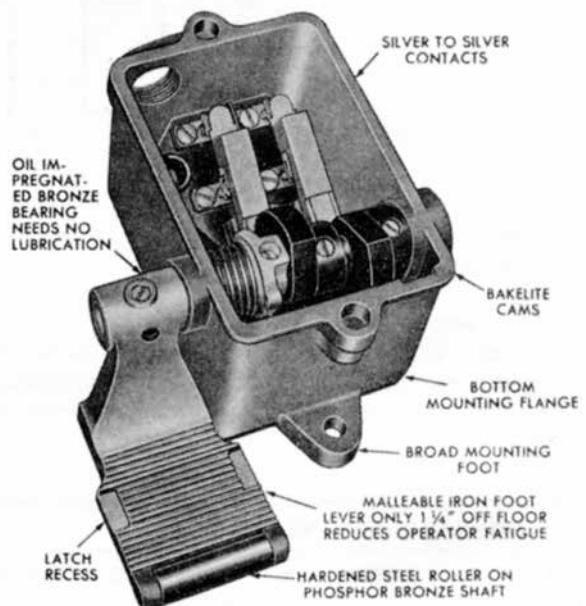

Watertight enclosures are available for all types except Type FWLSA-22. The same heavy case is specially fitted with watertight bushings and seals to meet NEMA watertight tests.

Features

- Double Break removable Silver-to-Silver Contacts.
- Contact wearing parts completely interchangeable with the same parts in Type 101SD Master Switch, and Type 102HL, TL and CHL Limit Switch.
- Each contact may be independently changed from NO to NC and vice versa without disassembly.
- Oil impregnated bearings at contact finger pivot points.
- Oil impregnated shaft bearings need no lubrications
- Malleable iron operating pedal.
- Spring return standard.
- Cast Weatherproof enclosure standard.

No. 3	15 lbs.

Type 101SD Master Switches are designed as pilot circuit devices for frequent operation with minimum maintenance on heavy duty application in all industries. The type SD units are sturdy devices constructed for heavy duty service where few control circuits are required. Type SD Switches are made in two frame sizes:

Type SD-2 is a single point device, one point either side of the off point, and there are two isolated contacts which can be opened or closed in various combinations.

For the usual circuit arrangements refer to page G14.

Type SD Master Switches are supplied in watertight enclosures; panel mounted units have angle brackets for back of panel mounting. Spring return to the off point is available.

DC CONTROL

146 Field Loss Relay

Series 146 Relays provide excellent protection against over speeding on DC shunt or compound wound motors in the event of an open circuit in the field. The relay coil is connected in series with the shunt field while the re-lay motor contacts are in the motor control circuit. The relay coil is de-energized if the field opens and the relay contacts open to disconnect the motor from line. Where shunt or compound wound motors are operated at light loads or not rigidly connected to the load, field loss relays provide protection against motor and load damage from over speeding. The Series 146 Relay is a UL recognized component.

Coils are designed to carry maximum field current continuously. Relays are factory adjusted to pick-up at one tenth of the maximum field current amps. listed. Drop-out is approximately 62% of the pick-up value. Other pick-up values on special order.

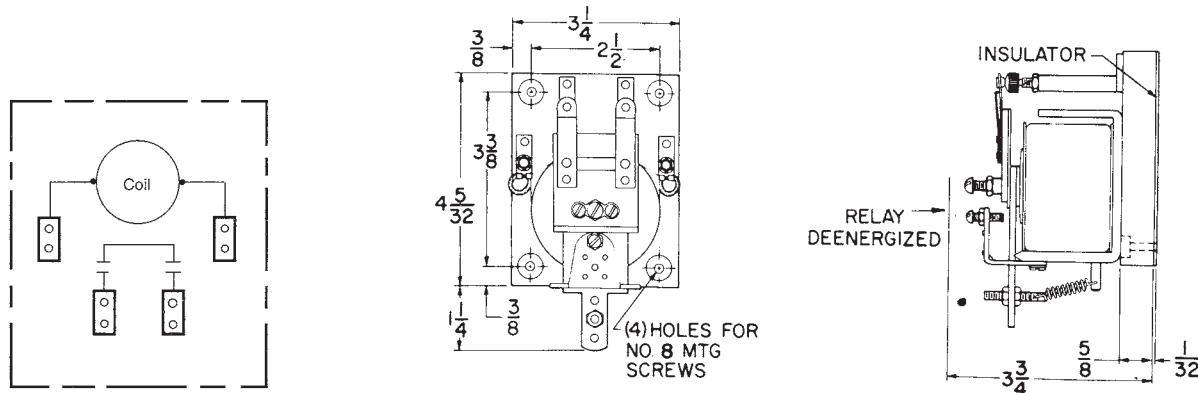

Field Loss Relays (DC) - 146 300V DC Max.

Engineering Data:

Dimensions -Approximate

Ordering Information

- Use complete catalog number when ordering.
- Contact Rating: Single pole double break normally open contacts, rated at 0.7 amps., 250 V DC Max.

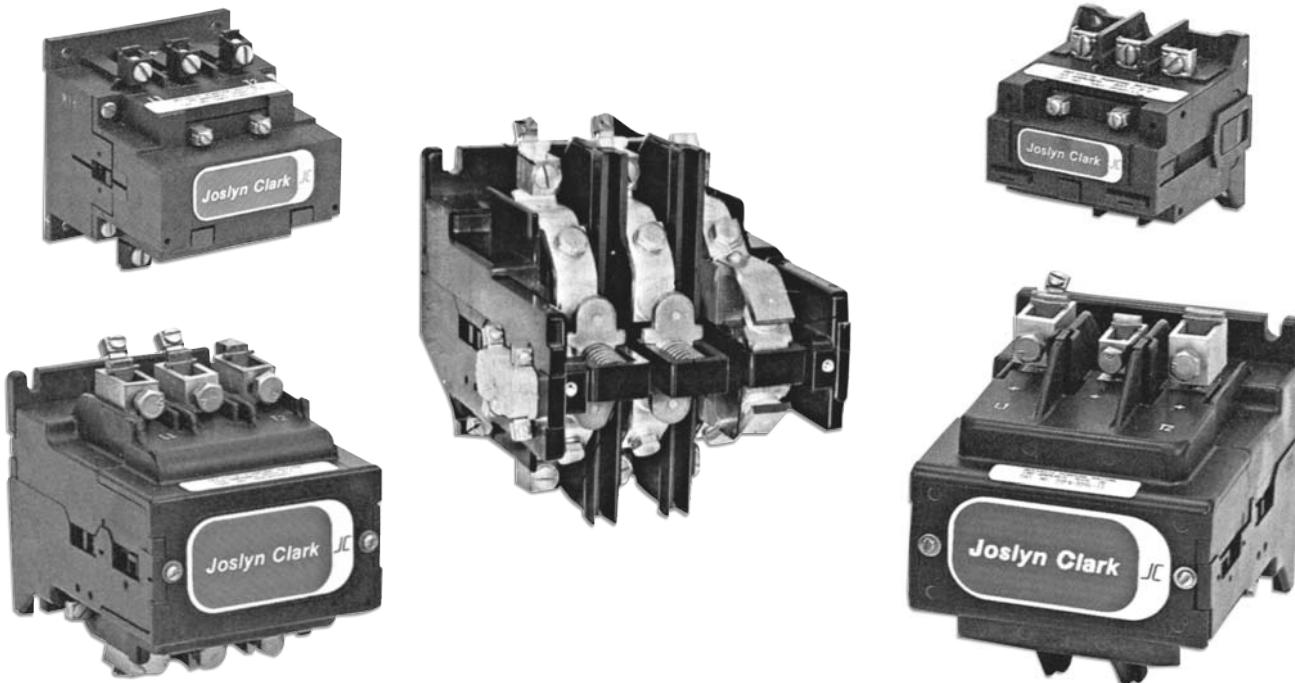

5DP Definite Purpose Contactors are designed for DC adjustable speed drive circuits using silicon controlled rectifier switching and other controls where a combination of normally open and normally closed power contacts are required. In all applications, reduced panel space for contactor mounting is made possible through a compact design and the built-in N.C. dynamic brake power contact feature.

In silicon controlled rectifier switching circuits, the SCR is normally phased back prior to contactor opening. Therefore, the N.O. contacts are not required to interrupt any appreciable current. Under abnormal conditions such as failure of the SCR or the control circuit, the contactor may be required to interrupt up to 200% current. The N.O. contacts are equipped with permanent magnet blowouts to meet this requirement.

The dynamic brake N.C. contact is required to insert the dynamic brake resistor and therefore must make up to 200% of rated current each time the contactor is de energized.

Jogging is accomplished at low voltage and current. Therefore, the dynamic brake contact is rated at 1/3 of rated voltage and dynamic brake current. The permanent magnet blowouts provide this interrupting ability.

F

- 1. Normally Closed Double Break Power Contacts** - made of silver cadmium oxide furnish "anti-weld" protection under overload conditions. Generous size contacts are long lasting, and maintenance-free. All N.C. power contacts supplied with permanent magnet blowouts to lengthen contact life.
- 2. Normally Open Double Break Power Contacts** - incorporate the same design features as the normally closed power poles. Permanent magnet blowouts are also furnished on d.c. load applications.
- 3. Permanent Magnet Blowouts** - mounted to surround the power contacts, function to quickly quench the arc when breaking loads, thereby increasing contact life and assuring positive load circuit interruption. All normally closed poles are furnished with permanent magnet blowouts. Normally open poles can be supplied with or without blowouts as indicated in the circuit symbols shown on page J6.
- 4. Stainless Steel Springs** - maintain exact contact pressure and assure fast contact break (N.O.) and make (N.C.).
- 5. Molded Housing** - constructed of hot-molded, high impact, high arc resistant insulating material. This design totally encloses the contacts and operating magnet in separate compartments and functions to eliminate internal phase-to-phase short circuits.
- 6. Molded Coil** - is layer wound, designed for continuous duty service. Coil construction resists moisture; thermal and mechanical stress. Coil connections are made to pressure type terminals.
- 7. Free-Floating Armature-Magnet Frame** - provide quiet, low vibration, low friction operation. Precision ground pole faces achieve an absolute air gap which prevents "hanging-up". Magnet frame is sized for fast, powerful operation and self-seating extends operational life.
- 8. Auxiliary Contacts** - for 10/40 amp. contactors are available with either the front mounted snap action type with quick connect terminals or the side mounted type with pressure terminals. Contacts for larger sizes in standard or special make-before-break contact combinations feature either standard double break silver-to-silver contacts or low power gold alloy contacts.
- 9. Pressure Type Terminals** - accessible, up-front location permits modern straight-thru wiring. Terminals accept stripped, un-lugged wires.

Notes:

1. Contact Kits for 1-pole include stationary contacts, movable contacts and contact spring except as noted for 700 amp. size.
2. Assembled kit for 1-pole including yoke with movable contacts and springs; stationary contacts.
3. For all pole combinations except 2-pole N.C.
4. These coils are for exact replacement at operating voltage and frequency listed.
5. Power pack assembly kit includes rectifier, economizing resistor and terminal block.
6. Values measured at rectifier power pack input.
7. It is necessary to phase back the SCR's so that contactor normally does not interrupt appreciable current. Contactors with blowouts and 2 N.O. contacts will interrupt 200% current under abnormal conditions.

DC CONTROL - 7400

General Information

DC Contactors in sizes 1 Thru 5 are for use as main line, reversing or accelerating contactors in DC motor starters and controllers. Other applications include switching resistive heating and battery loads.

Description

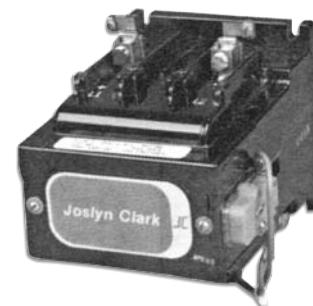

All DC Contactors are solenoid operated for fast, constant, long-life performance. Generous size double break silver cadmium oxide contacts in combination with built-in permanent magnet blowouts assure long contact life and positive circuit interruption. Terminal location makes the contactors ideal for straight-through wiring and for wire channel layouts. Accessible up-front pressure-type terminals are furnished as standard.

Auxiliary Contacts

All contactors can be furnished with N.O., N.C. or N.O. & N.C. auxiliary contact blocks. Each contactor can be supplied with a maximum of four auxiliary contact blocks. Kits are also available for field installation.

Operating Coils

Standard coils for DC operation are molded and equipped with pressure type terminals. The DC coils are furnished with late break auxiliary and economizing resistors as standard. AC coils can be furnished for applications requiring an AC control circuit.

RHEOSTATS

Vitrohm plate type 100-2000 WATTS 600 VOLT SERVICE

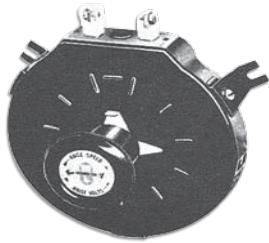

Fig. 1. Vitrohm pressed steel rheostat for front-of-board mounting.

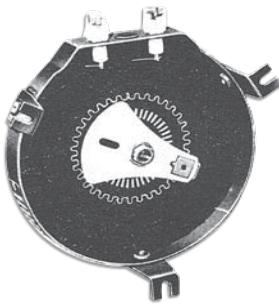

Fig. 2. 8" Vitrohm rheostat, Type S standard contacts, front-of-board mounting.

Fig. 3. 8" Vitrohm rheostat, Type M multi-step contacts, front-of-board mounting.

STANDARD SIZE RHEOSTATS - 6", 8", 13" TYPES S and M

F

APPLICATION

Vitrohm pressed steel rheostats furnish a simple, accurate and economical method of field control. They are universally applied for adjusting generator, alternator and exciter field currents to obtain variations in output voltage and for field control of adjustable speed D.C. and synchronous motors. Other typical applications include heater, furnace, battery charging and other controls.

4" RHEOSTATS-300 Volt Max. Service

APPLICATION

Vitrohm 4" rheostats for 300 volt max. service are specially designed for field and other control applications.

DANCER ROLL RHEOSTATS- 6, 8, 13 inch Types S and M

APPLICATION

Series 60DR rheostats are for dancer roll service on multi-motor drives where relative speeds between the motors must be maintained within specified limits. Typical applications of these field control rheostats include textile, paper, steel mills and others in the process machinery field.

MOTOR DRIVE ACCESSORIES-Type SMD

APPLICATION

Type SMD Accessories are for use with 8" or 13" rheostats where motor driven operation is required. Standard assemblies can be applied to drive up to four plates simultaneously. For larger 15 1/2" and 18" rheostats as well as the 13" size, a Type LMD large motor drive is available on order.

TO ORDER RHEOSTATS

- * Consult Factory for price and availability
- * If replacing an existing unit have the "K" number or serial number available.

FOR GENERATOR FIELD CONTROL SPECIFY:

1. Whether self-or separately-excited. If separately excited give voltage, field resistance (hot or cold) and minimum field current. If self-excited state maximum field current and field resistance (cold) under no load conditions, or peak generator voltage and field current at peak voltage and minimum generator voltage with field current at minimum voltage. For special control requirements supply saturation curve.
2. Open or enclosed
3. Type contacts
4. Type accessory.
5. Manual or motor drive
6. Optional or special

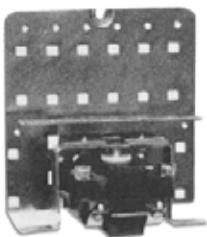

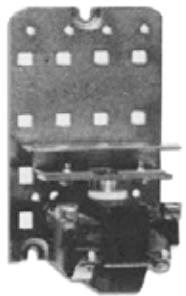

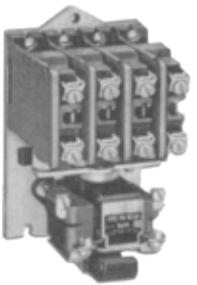

FOR OTHER APPLICATIONS SPECIFY:

1. Maximum and minimum current
2. Rheostat resistance.
3. Open or enclosed
4. Type contacts
5. Type accessory. If back-of-board mounting, state panel thickness
6. Manual or motor drive.
7. Optional or special features required.

Consult Factory for all Requirements

G

RELAYS - PM

General Information

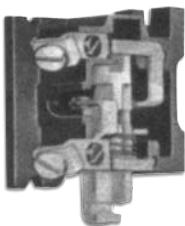

The Joslyn Clark PM Family of control relays provides flexibility, versatility and reliability. The exclusive design concept and rugged construction of the PM line offers many advantages for the designer and builder of today's complex control panels.

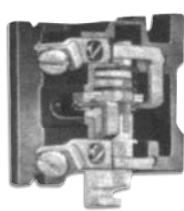

Features:

- Modular Construction -allows field addition, replacement or conversion of poles for unlimited flexibility.
- Uniformity of Design -simplifies engineering, installation and maintenance.
- Interchangeability of Parts - reduces inventory requirements. Flexibility of Application - provided by many modifications including noble metal, gold bonded, anti-weld and overlapping contacts.

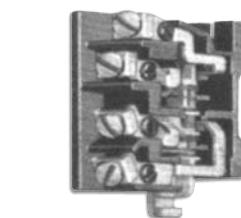

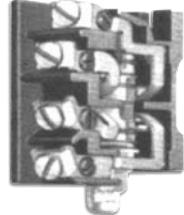

G

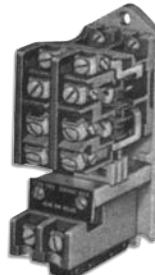

Convertible Poles contain one contact, either NO or NC and can be easily field converted from one to the other. Identified by WHITE operating rod.

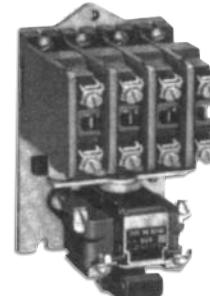

Universal Poles contain two independent isolated contacts, one NO and one NC. Identified by RED operating rod.

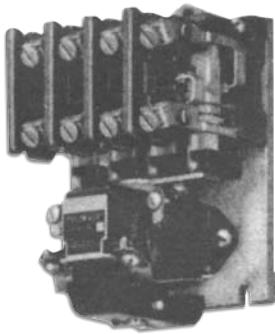

Duplex Poles contain two independent isolated contacts, both NO. Identified by GREEN operating rod.

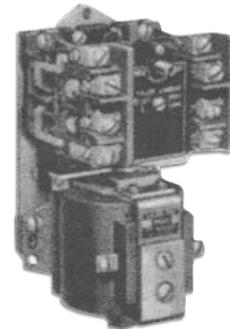

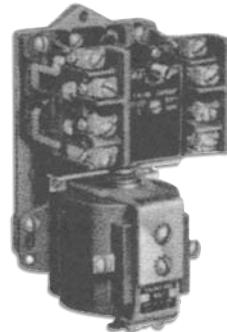

PMS Slim Jim Relays are 1 - 1 1/2" wide. They are the smallest members of the PM Family. Available with up to 4 contacts; they provide the reliability of heavy duty 600 Volt relays in the smallest possible space.

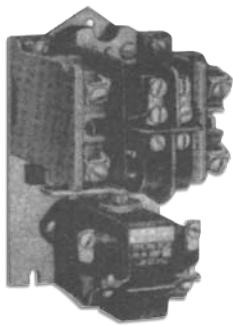

PM Convertible Pole Relays use white rod poles and are offered with up to 8 contacts in any combination of NO and NC contacts. Relays with up to 12 contacts using double deck bases can be supplied.

Type Relays, using universal poles have up to 12 contacts. Relays with up to 14 contacts are available, using some convertible poles. Type PMF Relays, combining several types of poles can have up to 14 contacts.

Type PMT Pneumatic Timing Relays, these relays are available for either "on-delay" operation (time delay after energization) or "off-delay" (time delay after de-energization). They may also be field converted from on to "off-delay" and vice versa, by merely inverting the operating magnet. Type PMT Time Delay relays are adjustable over a timing range from 0.2 seconds to 3 minutes with repetitive accuracy of $\pm 10\%$.

Latch Relays are available with either white rod convertible poles or red rod universal poles. The latching unit with continuous duty trip coil replaces the two pole modules directly above the relay magnet.

1 Maximum of 8 contacts only.

2 PMF relays with N.C. contacts have universal red rod & duplex green rod poles. Maximum of 8 contacts only on 25 hz.

3 Includes open type relay complete with operating coil. Latching relays include latch unit with continuous duty trip coil.

4 Overlapping contacts are available. Specify when ordering.

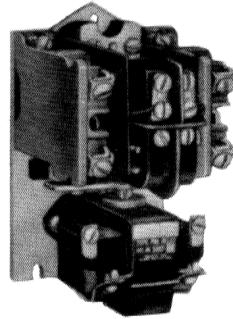

5 For Dimensions, refer to page G7 For modification Kits, refer to page G11.

6 Additional relays with alternate pole configurations available.

Latch Relays

The latch unit occupies the space of two poles directly above the magnet, and provides a means of holding the relay in the energized position after the coil of the main operating magnet is de-energized. Momentarily energizing the continuous duty coil of the latch unit allows the relay to return to the normal, de-energized position.

Relay Enclosure P6E-01

Notes

- Includes open type relay complete with timing head and operating coil. To complete Cat. No., add coil suffix.
- On Delay - Timed interval occurs between energization of the coil and actuation of timed contact.
- Off Delay - Timed interval occurs between de-energization of the coil and actuation of timed contact.
- Each universal pole consists of two independent isolated contacts suitable for 600 volts at opposite polarity.
- Relays may be converted in the field from On Delay to Off Delay and vice versa, using only a screwdriver. When this conversion is made, normally open contacts become normally closed contacts and vice versa.
- On sketches showing universal pole arrangements: Letters T indicate locations of time delay poles. Letters I indicate locations of instantaneous poles. Dotted lines indicated locations where universal poles may be added. Class A relays may have two timed poles maximum.

RELAYS - PMS

DC Relays

DC Relays - Type PM Bulletin 7304

General Description

Bulletin 7304, Type PM, D-C Convertible Pole Relays feature many of the same time-proven advantages offered by the highly successful Bulletin 7305 Type PM A-C Relay. For example, normally open poles are quickly and easily convertible to normally closed and vice versa. Each pole is contained in its own molded housing mounted by a single screw. Thus, each pole may be removed, installed or replaced individually without disturbing the others. The large double-break contacts are made of fine silver alloy, and are rated for both inductive and resistive loads. The contacts are designed with wipe action to assure maximum reliability.

For long trouble-free relay life, the D-C coil on Bulletin 7304 Relays is molded with tough epoxy resin to keep out dirt and moisture, and to prevent physical damage. The magnet used is a vertical lift type with no springs that require adjustment. It is designed with pull-in characteristics that keep magnet slam to a minimum.

Extra wide pressure terminals are front mounted for ready accessibility. As many as three lugs for No. 12 wire can be connected to each terminal.

Bulletin 7304 Relays are available in 2,3,4,6 and 8-pole arrangements.

DC Latch Relays - Type PML Bulletin 7305

Bulletin 7305, Type PML, D-C Latch Relays are identical in design, construction and dimension to the Type PML, A-C Convertible Pole Latch Relays except they incorporate the use of one "universal" pole on the relay to permit continuous application of voltage to the relay "Close" coil and latch "Trip" coil. The schematic diagram below illustrates how this is accomplished.

Up to 8 convertible poles in any combination of N.O. and N.C. contact arrangement are available for circuit use. The contacts can be readily converted in the field from N.O. to N.C. operation, and vice versa. The latch mechanism is the same rugged unit used on Type PML-A-C latch relays.

RELAYS - PMT

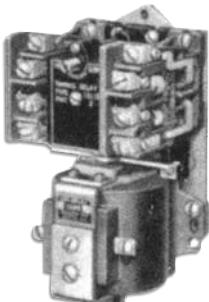

DC Time Delay Relays

DC Pneumatic Time Delay Relays - Type PMT Bulletin 7314 (.2 seconds to 3minutes)

"On-Delay" Operation

"Off-Delay" Operation

Bulletin 7314 D-C Time Delay Relays are identical in construction to the Bulletin 7313 Timing Relays except for the use of a conventional 2 lead operating coil rather than a tapped (3-lead) coil. They feature the same accurate piston-type timing head as used on all other timing relays in the PM family.

Universal poles, with two electrically isolated contacts per pole-one normally open and one normally closed-are also used. These timing relays are available for either On Delay or Off Delay operation in three basic models: (1) with timed pole; (2) with one timed and one instantaneous pole or (3) with two timed poles.

Timing range adjustable from 0.2 seconds to 3 minutes							Accuracy + 10%		
Type Oper'n Plus Delay	No. of Univ. Poles	Contacts				Universal Pole Arrangement	Open Type Relays Without Dial Catalog No		
		Time Delay		Instan.Aux.					
		N.O.	N.C.	N.O.	N.C.				
On Delay Off Delay	1	1	1				714UP		
		1	1				714UPD		
On Delay Off Delay	2	1	1	1	1		714UPA		
		1	1	1	1		714UPDA		
On Delay Off Delay	2	2	2				714UPE		
		2	2				714UPDE		

Coil Burden 17.2 watts

Notes:

- 1 On Delay - timed interval occurs between energization of the coil and actuation of timed contact.
- 2 Off Delay - timed interval occurs between de-energization of the coil and actuation of timed contact. Field conversion of relays from On Delay to Off Delay operation, or vice-versa, is not recommended because a special technique is required.
- 3 Each universal pole consists of 1 N.O. & 1 N.C. independent isolated contacts suitable for 600 volts at opposite polarity, a-c or d-c.
- 4 Letter T on relay sketches indicated location of time delay poles. Letter I on relay sketches indicates location of instantaneous poles. Dotted lines indicate where universal poles may be added.

RELAYS - PMT

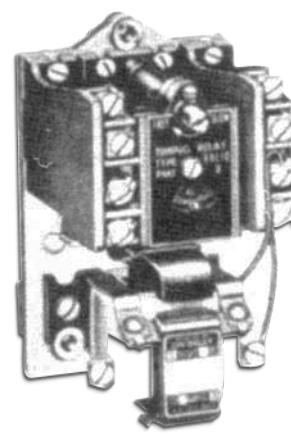

DC Time Delay Relays

DC Pneumatic Time Delay Relays - Type PMT Bulletin 7313 (.2 seconds to 3 minutes)

Bulletin 7313, Type PMT, D-C Time Delay Relays are identical in construction and size to the A-C timing relays except they incorporate a tapped (3-lead) d-c operating coil and, hence, require the use of one N.C. contact in a universal pole to economize the coil (see sketches below). However, the N.O. contact in that pole remains available for customer use. Timing relays with conventional 2-lead coils can also be supplied. Refer to Bulletin 7314-PMT.

Timing Range Adjustable From 0.2 Second to 3 Minutes - Accuracy ± 10%

G

Standard catalog listed AC relays ordered will have the proper coils as determined by the voltage and frequency suffix to the catalog number. Changing the circuit arrangement on a relay also changes the mechanical load on the magnet and may require a change of operating coil to assure proper operation. The information on this page will enable you to select the correct operating coil for any circuit arrangement required. Voltage-ampere requirements are provided to help in designing your panels.

To select the proper operating coil for all basic and latch relays **except** the Slim Jim, first determine the mechanical load on the magnet simply by totalling the load represented by the individual components operated by the magnet, using the mechanical load factors shown below. Select the proper coil from Table 1. When selecting the proper coil for Slim Jim Relays and Time Delay Relays, it is not necessary to determine the mechanical load factor.

As shown in Table 1, one coil for each voltage and frequency will operate all pole combinations.

Mechanical Load Factors:

Convertible Pole - Normally Open	10
Convertible Pole - Normally Closed	12
Double Contact Pole - Universal or Duplex	36
Latch Mechanism	20

Example:

A relay with 1 N.O. and 9 N.C. convertible poles and a latch mechanism will have a mechanical load factor as follows:

1 N.O. Convertible Pole	10
9 N.C. Convertible Poles	108
Accumulation Factor ¹	30
1 Latch Mechanism	20
Total Mechanical Load Factor	168

¹ For relays with 9 or more normally closed convertible poles, an accumulation factor of 30 must be added to the total mechanical load factor for the relay

For Example:

Table 1 indicates that the proper coil number for 110 volts, 60 hertz application is TB113-61, since the load factor of 168 falls within the Mechanical Load Range of 145 to 192.

RELAYS - 447

Control Relays

Description

Series 447 relays are designed for AC and DC circuits where high reliability, versatility of contact and operating coil combinations, compact size, and high speed operation are required. The 447 relays are available up to 8 convertible poles, current ratings to 30 amps AC and 20 amps DC.

3 Tungsten or Resistive Loads,
277 VAC Max.

Unit Poles - DC Load (Table 3)

250VDC Max

Description ⁴	Cat. No.
20A, N.O. 1-Blowout	447-9019
20A, N.O. 2-Blowout	447-9020
20A, N.C. 1-Blowout	447-9021
20A, N.C. 2-Blowout	447-9022

4 All DC contacts require a "Blowout Mechanism" to extinguish the "arc" during contact opening. See Rule "B" below.

Rules to Select and Install Contacts

A. When installing "AC" or "DC" contacts you should balance the mechanical load on the coil magnet preferably by placing the contacts together in the center and working your way out.

- For a 4-pole contact install the contacts in sequence per the diagram listed below.
3 2 1 4

- For an 8-pole contact install the contacts per this diagram.
5 3 2 1 4 6 8 7

B. When installing DC contacts, using the contact sequence above, the last contact on the left must have two blowouts.
All others will have only one.

Example:

If you have four contacts on the 4-pole base (table 1), number 3 must have two blowouts. If you have only two contacts, then number 2 must have two blowouts.

If you have six contacts on the 8-pole base (table 1), number 5 must have two blowouts.

Contacts seven and eight on the 8-pole base must have two blowouts.

Application

The Joslyn Clark Type PM - LC and LCL are magnetically operated lighting contactors designed to switch filament and ballast lighting loads as well as general purpose non-motor loads. Contactors are available in both electrically held and mechanically held versions. Coil-clearing contacts are furnished as standard on the mechanically held version to conserve energy, reduce heat, and eliminate AC hum.

The contactors are fully rated and are available in 20 amp and 30 amp ratings. The 20 amp is available up to 14 poles in electrically held and up to 10 poles mechanically held. The 30 amp is available up to 8 poles in both the electrically held and mechanically held versions. All power contacts are anti-weld type.

LIGHTING CONTACTORS

447 Series

Typical 30 Amp.
Electrically Held Lighting
Contactor, 4-Pole

Application

Series 447, 20 & 30 Ampere contactors are engineered for a wide variety of lighting circuit switching where long-life, compact size and versatility of contact combinations are prime application requirements. The 20 Ampere and 30 Ampere contactors are available as electrically held types, and do not require coil clearing contacts. Both sizes are City of L.A. approved.

Description

These Lighting Contactors are magnetically operated with contact poles electrically held. Parts are compactly arranged on a steel mounting plate - one size plate accommodates 4 poles or less and another for 5 poles or more. The N.O. unit poles, with the same basic construction on all sizes, have a molded insulating housing enclosing the contacts for environmental protection. Wiping action, double break silver alloy contacts for positive make, fast break are standard. A single screw fastens each unit pole to the base plate.

All terminals are accessible and are equipped with pressure connectors (accommodating two No. 12 or 14 solid or stranded wires) for reliable, shakeproof connections.

Sub-Assemblies

In addition to the contactors listed in the table below, sub-assemblies are available allowing fast, easy assembly of complete contactors by the customer to meet job requirements.

For Sub-Assemblies please see page G18

Eagle Signal Controls

The Premier Name in Timers

Accuracy and reliability are the name of the game when it comes to timers. You have to be able to trust that the run time, production time and process time will be just right every time. For over 70 years, Eagle Signal has been delivering that dependability with its complete line of mechanical, electromechanical and electronic timing devices. With unique innovations like the NEW MAX ADVANCED Count, Tach and Position Controller Series in addition to our long-standing products, Eagle Signal has a reputation with OEMs and design engineers for providing timing products they can trust.

VEEDER-ROOT

The Industry Standard in Counters

Veeder-Root offers the broadest selection of rugged and economical electronic, electromechanical and mechanical counters. Veeder products encompass a complete line of totalizing, preset and predetermined electronic counters as well as diverse process and rate indicators. Veeder-Root, the world's best known name in counters, has provided non-stop performance and production monitoring in industrial manufacturing applications for over 100 years.

Look no further than Thomson Nyliner

Since 1954, Thomson Molded Products Group has been an industry leader in high-quality bearings, fasteners and industrial solutions for clients in six different markets. Our line of standard and custom products uses a maintenance-free proprietary polymer specifically designed to reduce friction, isolate noise, dampen vibration, resist corrosion and lower operating costs for a range of industrial uses. In addition, we also custom manufacture a complete line of products including spacers, grommets, hole plugs, leveling feet, door glides, hooks, friction pads and shelf supports to specification.

An unmatched reputation for excellence – our name says it all

When you need high-quality, high-reliability voltage or power control and conditioning products, don't make concessions. Superior Electric is your choice. Our products and engineered solutions are among the finest in the world. Superior Electric POWERSTAT® Variable Transformers are used across six continents in millions of installations, while our STABILINE® voltage regulators, surge protective devices, UPS and power conditioners continue to be the industry standard for users.

The Toughest Conditions Call for NAMCO Switches

When a situation calls for heavy-duty control switches, NAMCO switches are the answer. Our SNAP-LOCK® limit switches are renowned for exceptional quality and reliability under the harshest conditions. NAMCO was the first U.S. company to respond when non-contact electronic sensing was required in automotive assembly lines. This level of innovation and dependability has led NAMCO to be a recognized leader in high reliability electronic sensing. Even today NAMCO is the Number One global source for limit switches used in nuclear power plants qualified to meet NRC requirements.

DANAHER
SENSORS & CONTROLS
SPECIALTY PRODUCTS

Best-in-class solutions for today's global industrial automation market

Delivering high-quality products and efficient, cost-effective solutions to our customers is the driving force behind Danaher Specialty Products.

By combining the resources and expertise of six core technology leaders, DSP is able to share people, processes, innovations and insight. That allows us to offer OEM's and end-users the finest products and technologies available today, all in one place.
